

*WIGOS WORKSHOP 2019*

Session 2.8

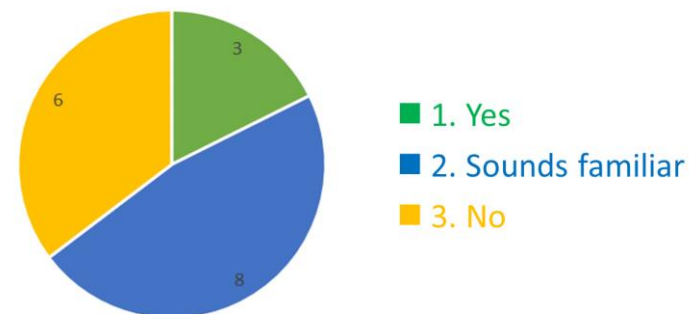

# Discussion on measurement quality classifications

# Pre-workshop interviews

## Q2.6-1 Do you know measurement quality classification?

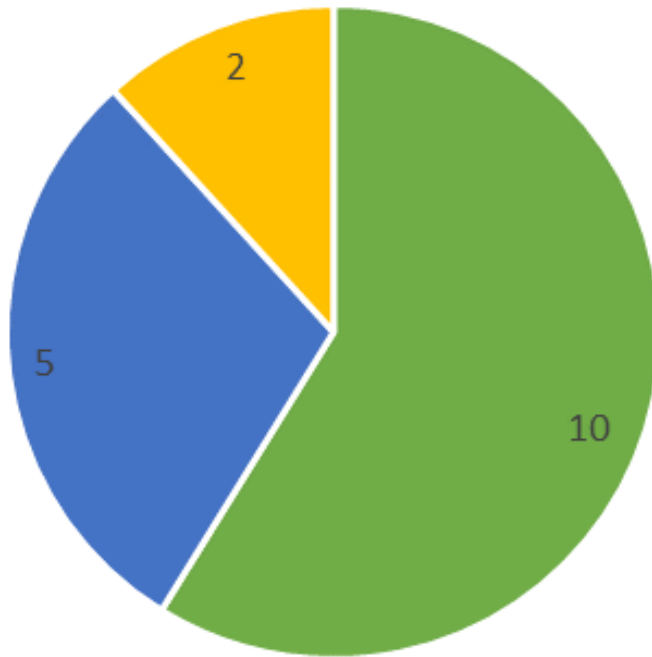

## Q2.6-1 Do you know measurement quality classification?

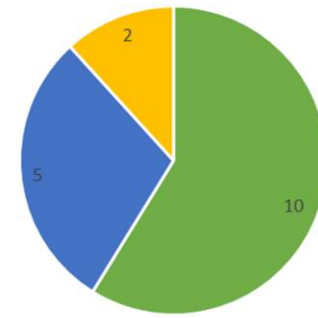

- Measurement quality classification has signification for good data/information to improve the quality forecasting also for policy decision in prevention and reducing the loss of disaster.  
*Dr. Duong van Khanh (VietNam)*
- I guess the measurement quality classification is categorization of stations depending on the quality of data we receive or it can be classification of quality of data we receive from observation station. However, not many people in Bhutan are fully aware of what this is.  
*Mr. Phuntsho Namgyal (Bhutan)*
- We don't have idea whether it is about upgrade of measurements or measurement accuracy. *Dr. Amgalan Ganbat (Mongolia)*

## Q2.6-2 What is the benefit of introducing measurement quality classification?

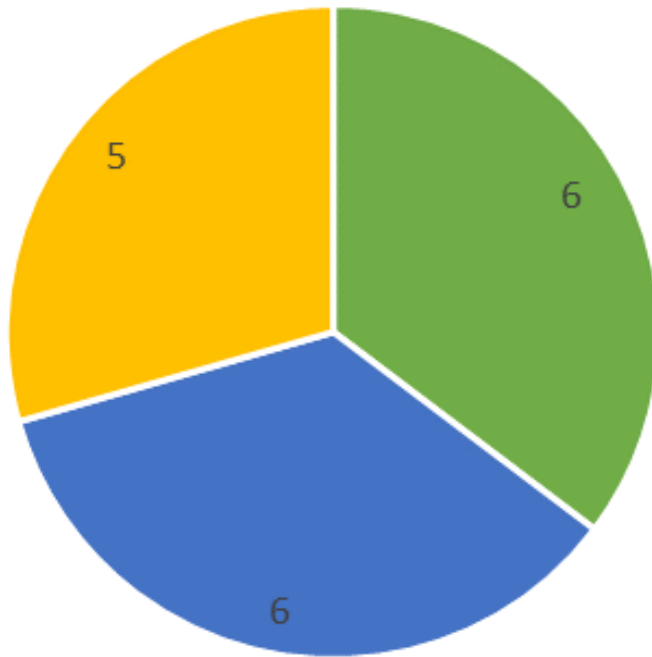

- 1. We can know the reliability of observation data
- 2. Motivation for observation quality improvement
- 3. Don't know

## Q2.6-2 What is the benefit of introducing measurement quality classification?

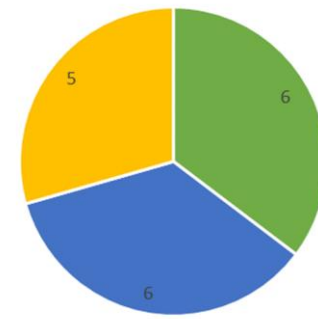

- The benefit of introducing measurement quality classification help us know the reliability of observation data and it is Motivation for observation quality improvement. *Dr. Duong van Khanh (VietNam)*
- Measurement quality classification can be very useful in determining the reliability of the observational data and it can also serve as motivation factor for quality observation. *Mr. Phuntsho Namgyal (Bhutan)*
- I think that improving observation quality is more benefit if regarding to measurement quality. *Dr. Amgalan Ganbat (Mongolia)*

## Q2.6-3 What is the concern caused by the introduction of measurement quality classification?

- 1. Evaluated as low classes
- 2. Additional work for classification will occur
- 3. Don't know

## Q2.6-3 What is the concern caused by the introduction of measurement quality classification?

- The concern caused by the introduction of measurement quality classification is evaluated as low classes.  
*Dr. Duong van Khanh (VietNam)*
- While I am not sure what major concerns would arise, it would definitely need more human resources.  
*Mr. Phuntsho Namgyal (Bhutan)*
- After getting understanding of measurement quality to concern as low classes. *Dr. Amgalan Ganbat (Mongolia)*
