まえがき

本書は、1923年（大正12）9月1日関東地震以後 1956年（昭和31）2月14日の江戸川下流域の地震までの33年間に、気象官署で震度IV以上を感じた地震50個について、気象官署の地震計記象紙を集録したものである。

わが国は、世界でも地震の多い国であり、しばしば大地震に見舞われている。建物を破損するような地震になると、防災的な見地から利用者は、日時や震源地のみにとどまらず、地震動の振幅、周期、加速度などの科学的な資料を必要としてきた。

幸い気象官署においては、長年月にわたって不断の観測を続け、貴重な資料を得ているので、これらの要望に答えられるのは気象官署のみであり、われわれの誇もある。しかしこれらの資料は、個々には発表されているが、総括したものではなく、しかも、たびたびの利用によって破損するおそれがあるので、ここに科学技術庁資源調査会保全防災部会地震小委員会の要望があつて本書を発刊し、さらに本書に集録した記象紙は、全部をマイクロフィルムに収めて保存することにした。これらの資料は、気象官署における地震観測、津波予報、防災などに役立つ資料として、今後大いに利用されるものと信ずる。

本書の発刊にあたり、多年にわたり観測を続け、さらに記象紙の保存、整理などにおほねおり願った気象官署の諸氏ならびに本書の編集にあたった広野卓蔵氏の勞に対し、深甚の謝意を表する次第である。

なお、本書の印刷については、科学技術庁のご承認を得たことを付記し、あわせて深謝の意を表する。

昭和32年9月

気象庁長官 和達清夫

Microfilm Index	136

EXPLANATORY NOTES

1. The contents of this volume covers all the earthquakes of more than seismic intensity IV in JMA Scale recorded at the seismological stations under Japan Meteorological Agency during the period from 1923 (Kanto Earthquake) to 1955.
2. Seismograms are arranged chronologically totalling 45 earthquakes. The order is shown in Table 1, and epicentres are mapped in Figure 1.
3. Stations at which earthquake movements of more than IV of seismic intensity were observed are tabulated in Table 2, and relation between seismic intensity and acceleration are shown in Table 3.
4. A brief explanation of earthquake, intensity distribution map and notes of records precede every seismogram.
5. Five earthquakes seismograms of which were missing though accompanied by some disasters are also explained and shown of intensity distribution.
6. All the seismograms, 584 in total, collected for this purpose are microfilmed, of which the well-recorded 469 seismograms are selected and reproduced in this volume. The explanation of the latter and missing seismograms are given in notes of records mentioned in 4.
7. The microfilms are in the custody of Japan Meteorological Agency, Resource Bureau and other institutes concerned.*
8. The scale showing original dimension of record is appended to these reproduction as well as microfilm. The time-scale in the record shall be obtained from the running speed of recording paper. (cf. Note 4).
9. Constants of seismograph employed shall be referred to the notes of records mentioned in 4 and its approximate values to Table 4.
10. At the end of the volume a microfilm index is provided. Name of seismological stations are arranged alphabetically, and earthquakes chronologically. Seismograms which were not compiled in this volume are marked with asterisk (*). The location of seismological stations are shown in geographical coordinates.

* The copy of film from the original may be available by applying to the offices above mentioned.

Researchers are recommended to employ this copy for the minute investigation of the records as the microfilm can be easily read enough by a simple cimro-reader, while the most plates in the present volume are retouched more or less.

As a sample, a piece of the microfilm is illustrated here.
